Hi Warren,

I'm absolutely delighted that the Vitaklenz has worked for me. The thrush that plagued me constantly for 4 months after a miscarriage has finally gone (two months now). I'm also quite relieved that I didn't have any scary worms, or not as yet anyway. Anyway thanks again. On a side note, do you have a recommendation for treating eczema, which is covering parts of my body but more so on the face? Look forward to hearing from you.

Here is an update from Kerry on her problem

Hi Warren

I never thought that I would be sitting here writing to thank you for such a brilliant product. I've read testimonials for other different products in the past and have always been sceptical and thought that they might be a hoax. But Warren, I honestly thank the day that I found your product ParaCan and **then when you introduced an even better product called Vitaklenz** I knew that I'd found a company that truly cared and were striving to help people affected by this dreadful ailment.

After a miscarriage, I began suffering from a Thrush infection that I thought I had beaten years ago. I didn't relish the idea of going back to the messy creams and pessaries like Canistan or Nilstat which only really ever makes the infection gradually worse before masking the problem, and then comes back with a vengeance a few weeks later. I thought that surely there must be a better product even if it meant buying something from overseas. I consulted doctor after doctor who still prescribed the same creams and even tablets that you take orally which I have since found out can be hazardous to the liver.

My problem was getting increasingly worse, burning pain and the most unbearable itch. It got to the point where it wasn't just affecting me - it was affecting my family. Here I was, fighting a yeast infection that was making me more and more miserable. I became snappy and irritable. I started an anti-Candida diet, which is absolutely ridiculous. I couldn't eat the fruits and breads that I love, couldn't touch any alcohol and anything with yeast and sugar was completely out and I had to take a daily dose of acidophilus. I also found that I always seemed to have itchy ears despite cleaning them on a daily basis.

I started doing more and more research on the Internet and finally found Bodyfixer (my saviour!). I started out by emailing Warren Jones at Bodyfixer and I was immediately impressed with his prompt reply, and never has he made me feel embarrassed about my Candida problem and I am able to speak freely without any inhibitions. I have read quite a few reports on many of the ingredients and I did my own research into the other ingredients and I was very impressed.

After receiving my first bottle I noticed a difference after about one week with my general health and well-being. I think I felt fresher. Since then, approximately 3 months ago, I have not looked back. I have not had thrush at all, and I can eat what I want and drink what I want. A door has opened for me to be able to enjoy life at its fullest. I easily went onto **Vitaklenz** when it replaced ParaCan and with the addition of St. Mary's Thistle I know that it is not only helping to fight the Candida within my body but helping me to keep my liver healthy as well.

Thanks Warren and it's always great chatting with you.

First I, and all my family would like to thank you for smiting some worms we think we had. We're actually not sure. - but whatever was there is gone now thanks to **Vitaklenz**. It was awesome, so, many thanks! I was wondering if I might be able to ask if these symptoms might imply the existence of a certain parasite (worms?) in this 1-yearold's body and if you could help me by recommending some medicine. He is living in a northern Africa in a rather unsanitary environment therefore vulnerable to worms I assume. But just to make sure, here are the symptoms. He is fed well, but not gaining weight in any area of his body except in the stomach. It is bloating at an incredible rate of almost a centimeter a day. There is no pain, or any evidence at least. I would really very much appreciate it if you could reply asap. Any suggestions on treatment would be great. I trust you guys have something. Thank you so much.

Martha

Dear Sir

"My kids seemed to suffer from worms every few months. It was so frustrating! I would dose them up on the drugs from the pharmacy, their itching would go away, and then a couple of months it would start all over again. Feeding my children on these drugs so regularly was a real concern to me.

A friend put me onto Vitaklenz. I was initially a bit worried as my youngest is only 7. I started him on just one capsule per day though, and then gradually introduced a second one after the first week. He did fine on this.

After a full treatment of Vitaklenz—guess what? No more symptoms of worms. Vitaklenz seems like a great safe alternative to the drugs we used to use."

Dear Warren

It's always good talking to you. And again thanks for the products. I've been taken Vitaklenz since November 21, 2003, to date, and I also have access to the Quatum machine, which was illustrated in the New York Times Magazine. (a very high profile magazine). This machine will give you an assessment of your total health status based on data of passed, present and future body conditions.

I've tried many, many, many, many things to get rid of these parasites. I've tried, Chinese herbs, which was effective, taking garlic and coffee colon cleanses, a little effective, old remedies such as Turbine Tine and Asafetida Tincture to no effectiveness. Of course, I changed my diet to no alcohol, yeast, red meat, diary, and caffeine; together with using Colloidal Minerals to remove heavy metals, but none of these methods proved as effective as Vitaklenz.

I used to feel biting, pulling, twisting in my uterus and ovaries, where they live. I was to the point, where I was going to have surgery. How I contracted most of these parasites was through travelling all over the world basically. (The Quantum machine stated, where two of the worms came from-China and Brazil). The initial read out of the Quantum machine showed, four major parasites, ie. Ollulanus Tricuspis worm, Protostrongylus Ovatus, Hydatigera Taeniaeformis, and Anoplocephala Magna. All four of the parasites are gone now, except the Hydatigera Taeniaeformis, which is significantly weaker today, than two months ago.

Thanks,

Hi,

My name is Theresa Boschetti and today is my last day on Vitaklenz and it has helped greatly! I'm 59 yrs old, take real good care of myself but had Chronic Candida around 10 years ago after a heavy bout of Antibiotics and living in a moldy environment in the Mid West. Since that time I have to be careful with fruit and yeast products but in the last year I defied the restrictions and ate all the fruit I wanted and believe it really stirred up things. Before beginning Vitaklenz I was taking Olive Leaf from my Health Practitioner and noticed that I began having pinching in my ears. I know that children get mites and thought perhaps that was it. I don't have pets or children. Well the Vitaklenz took care of it except for perhaps 5% itching or pinching at the end of the day.

My question is should I go on another round of Vitaklenz or wait for a while. I'm not sure what it is but perhaps you do. I have never had this before.

Thanks again for your product. I had no ill effects and all went really well. I will recommend it to others!
